

P875 Strategic Project Management Framework for Executives

PMI-REP Certified Program 1492-PMP875 (14 PDUs)

2 Days

In today's dynamic and demanding markets, organizations that want to lead and achieve growth that far exceeds what their competition is planning for as well as what they have been used to in the past, cannot afford to be just a good organization, but rather a Great Organization.

There is a rapidly growing realization among those organizations that more and more management tasks can be handled as projects. The approach to the task, the disciplines required, the control that is possible and the measurement of the results provide a structure for business that allows organizations to respond with flexibility to a more dynamic environment.

Project Management is simply more than planning and scheduling. In fact, it is responding to contingencies, taking care of the relationships between the cross-functional teams and internal

and external stakeholders, providing leadership and transferring knowledge. It includes dealing with conflicting issues, managing changes and integrating diverse and competing requirements.

This would require those organizations to initiate, strategically align, prioritize, plan and successfully deliver hundreds of projects to achieve their desired vision. Those will include a mix of strategy, operational, new-product, new-services and capital investment projects. Projects that will require members of the cross-functional teams to be set accountable for delivering their scope as well as manage resources, labor and non-labor, collaborate with other team members, and communicate with external and internal stakeholders.

The objective of this course is to help participants to understand Project Management science and how it is used to successfully deliver strategically aligned projects to achieve the company's ultimate vision. During this course, the participants will learn how to attain their organization goals by applying project management not only to single projects but also at enterprise level. Further, participants will be taught how to incorporate the art and science of project management into new and exciting ways to do business. The course focuses on consolidating project principles across the organization.

Day One

- Introduction
